diencephalon, the brain stem, and the cerebellum.

The Central Nervous System | Anatomy and Physiology

The central nervous system itself arises from the neural tube (which first forms during the third week of foetal life). At the early stage of development, there are three distinct layers forming. These layers lie together and form the trilaminar germ disc and lie on the floor of the amniotic sac. They are composed of the following layers:

Chapter 12: The Central Nervous System

Spinal Cord. the cylindrical bundle of nerve fibers and associated tissue that is enclosed in the spine and connects nearly all parts of the body to the brain, with which it forms the central nervous system. Reflex Arc. the nerve pathway involved in a reflex action including at its simplest a sensory nerve and a motor nerve with a synapse between.

Anatomy Central Nervous system Questions and Study Guide ...

The central nervous system (CNS) is composed of the brain and spinal cord. The brain interprets information received by the spinal cord and generates its own signals and instructions for the body to carry out. The spinal cord transmits information from the brain to the body, and vice versa.
