continuoustime Takagi-Sugeno (T-S) fuzzy systems, based on the superstability conditions. The superstability conditions are the sufficient stability conditions, that are easy-to-use, because they are written as the restrictions on the elements of the matrices of linear subsystems of the T-S fuzzy model.

Fuzzy control is by far the most successful field of applied fuzzy logic. This chapter discusses human-inspired concepts of fuzzy control. After a short introduction to classical control engineering, three types of very well known fuzzy control concepts are presented: Mamdani-Assilian, Takagi-Sugeno and fuzzy logic-based

The main idea of the controller design is to derive each control rule so as to compensate each rule of a fuzzy system. The design procedure is conceptually simple and natural. Moreover, the stability analysis and control design problems can be reduced to linear matrix inequality (LMI) problems.
