Chapter 4: Roots and Powers - Mrs. Donnelly's Website

www.mathsrevisiontutor.co.uk offers FREE Maths webinars. The video shows how to interpret powers and roots as rational indices.

Powers and roots - YouTube

Find the value of the following powers: a. $6^2 = 6 \times 6 = 36$. b. $3^5 = 3 \times 3 \times 3 \times 3 \times 3 = 243$. c. $2^7 = 2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2 = 128$. d. $2^8 = 2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2 \times 2 = 256$. You already know from part c that $2^7 = 128$, so multiply this number by 2 to get your answer: $128 \times 2 = 256$. Find the value of the following powers: a. $10^4 = 10,000$.

Powers and Square Roots - dummies

Roots and Radicals. We use the radical sign: $\sqrt{\quad}$ It means "square root". The square root is actually a fractional index and is equivalent to raising a number to the power $1/2$. So, for example: $25^{(1/2)} = \sqrt{25} = 5$ You can also have. Cube root: $\sqrt[3]{x}$ (which is equivalent to raising to the power $1/3$), and

Exponents []. Exponents, or powers, are a way of indicating that a quantity is to be multiplied by itself some number of times. In the expression 2^5 , 2 is called the base and 5 is called the exponent, or power. 2^5 is shorthand for "multiply five twos together": $2^5 = 2 \times 2 \times 2 \times 2 \times 2 = 32$. Notice that the exponent tells us how many bases to multiply, not how many multiplications to perform.
