Viking Ship Anatomy Worksheet Answers

Viking longships were used in battle, and were long, light, and slender so they could move around quickly. They had a square sail and a mast, but could also be rowed if there was no wind. Depending on its size, a longship had 24 to 50 oars. The prow, at the front of the ship, was often adorned with a dragon or snake head.

Viking Longboat | Facts About Viking Boats | DK Find Out

Longship, also called Viking ship, type of sail-and-oar vessel that predominated in northern European waters for more than 1,500 years and played an important role in history. Ranging from 45 to 75 feet (14 to 23 metres) in length, clinker-built (with overlapped planks), and carrying a single square sail, the longship was exceptionally sturdy in heavy seas.

longship | Definition, History, & Facts | Britannica

Divide the class into small groups. Give each child a copy of the Viking Vocabulary worksheet (PDF). Have students use what they learned in the book and other Viking resources to label each part of the diagram. Have children give the diagram a title and write a caption that includes an inference they can make from the information in the diagram.

Cruise Ship Gas Mileage. Parts of Ships Common to All Ships. Body of the Ship or The Hull: The hull of a ship is responsible for the floatation property of the ship. Generally ships are single hulled (monohull design). It's only other vessels like catamarans (two hulls) and trimarans (three hulls) that have more than one hull to keep it afloat.
