The sequence also has a variety of relationships with the Fibonacci numbers, like the fact that adding any two Fibonacci numbers two terms apart in the Fibonacci sequence results in the Lucas number in between. The first few Lucas numbers are. 2, 1, 3, 4, 7, 11, 18, 29, 47, 76, 123,

Lucas number - Wikipedia

Fibonacci and Lucas numbers have intrigued amateur and professional mathematicians for centuries. This volume represents the first attempt to compile a definitive history and authoritative analysis of these famous integer sequences, complete with a wealth of exciting applications, enlightening examples, and fun exercises that offer numerous opportunities for exploration and experimentation.

Léger (1837), E. Lucas (1870, 1876-1880), G. H. Hardy, and E. M. Wright (1938). From this group, it was Francois Edouard Anatole Lucas (1870, 1876-1880) who gave Fibonacci numbers their name. He also investigated a similar sequence (sequence 2, 1, 3, 4, 7, 11, 18, 29, ...), which was later coined Lucas numbers.

Fibonacci and Lucas Factorizations. Fibonacci and Lucas Factorizations. Below are tables of known factorizations of Fibonacci numbers,Fn, and Lucas numbers, Ln, for n 10,000. The first composite "holes" are at F1409and L1366. Composite factors are indicated by "(C)" following the factor. Small tables of Fibonacci factorizations.

The Fibonacci series starts with f(0)=1 and f(1)=1. If we want to explore sequences where f(0) and f(1) are some arbitrary integers other than 1. For example, if f(0)=1 and f(1) = 3, then our sequence is a Lucas Sequence (See Figure 2a).

Golden Ratio, Fibonacci Numbers and Lucas Numbers

Edouard Lucas (1842-1891) (who gave the name "Fibonacci Numbers" to the series written about by Leonardo of Pisa) studied this second series of numbers: 2, 1, 3, 4, 7, 11, 18, ... called the Lucas numbers in his honour. On this page we examine some of the interesting properties of the Lucas numbers themselves as well as looking at its close relationship with the Fibonacci numbers.

Fibonacci number - Wikipedia

In the present note, we state and prove a new identity regarding an alternating sum of Fibonacci, and Lucas numbers of order k, analogous to (2). As a special case of this identity for k = 2, a new, identity follows that further reduces to a Fibonacci-Lucas relation derived recently by Martinjak [15].

An Alternating Sum of Fibonacci and Lucas Numbers of Order k

Any sequence of the Fibonacci-type, i.e., Fn = Fn – 1 + Fn – 2, can be expressed as a sum of a Fibonacci-term and a Lucas-term, as follows fn = (f1 – f0 2) φ n – ψ n φ – ψ + f0 2 (φ n + ψ n) where ψ = – 1 / φ.
