The book claims to be based on the textbook "Microwave and RF Engineering" by the same author. Actually, it is an expert from this book. All theoretical parts have been practically removed and the Genesys examples have been kept. This approach is quite problematic and sometimes the examples do not make sense due to the missing theoretical parts.

At low frequencies the entire cross sectional area is carrying the current. As the frequency increases to the RF and microwave region, the current flows much closer to the outside of the conductor. At the higher end of microwave frequency range, the current is essentially carried near the surface with.
