While diabetes isn't exactly "starvation", it does make cells think they're starving. Tight, regimented control of blood sugar levels can help diabetics avoid the many serious complications of the disease. The information on this website is based on our own research and personal experience, and is not a substitute for medical advice.

### How is Diabetes Like Starvation?

In a manner very similar to diabetic ketoacidosis, a lack of insulin is to blame in the case of prolonged starvation; however the difference is that the mechanisms of insulin secretion are intact, and some low baseline insulin level remains. Starvation results in decreased insulin and thus in increased lipolysis; the resulting increase in the delivery of free fatty acids to the liver exceeds the capacity of acetyl-CoA to enter the Krebs cycle, and ketogenesis results.

### Malnutrition: Definition, Symptoms and Treatment

Unlike patients with diabetic ketoacidosis, patients with starvation ketosis release insulin when carbohydrate is administered. They are also producing high levels of glucose elevating hormones such as glucagon and have depleted glycogen stores. These hormones cause the lipolysis which helps generate ketones for fuel.
