Vibrations

Definition of vibration 1 a : a periodic motion of the particles of an elastic body or medium in alternately opposite directions from the position of equilibrium when that equilibrium has been disturbed (as when a stretched cord produces musical tones or molecules in the air transmit sounds to the ear)

Vibration | Definition of Vibration by Merriam-Webster

Vibrations fall into two categories: free and forced. Free vibrations occur when the system is disturbed momentarily and then allowed to move without restraint. A classic example is provided by a weight suspended from a spring. In equilibrium, the system has minimum energy and the weight is at rest.

How our body 'listens' to vibrations -- ScienceDaily

Various members of the L.A. R&B vocal group The Vibrations, which had seven hit singles from 1961 to 1968, actually appeared on record as far back as 1956 and, to the mid-1970s, totalled something in the neighbourhood of 60 singles for several different labels, their sound often so different, depending on who took the lead and the type of song, that it was impossible to hear them on radio and say, definitively "that's The Vibrations."
